

6-24-6

POP-UP FERTILIZER

LIQUID N-P-K

ENCOURAGES RAPID SEEDLING EMERGENCE AND GROWTH

INGREDIENTS

Total Nitrogen	6.0%
6.0% ammoniacal nitrogen	
Available Phosphate	24.0%
Soluble Potash	6.0%

SPECIAL FORMULATION AIDS CROP GROWTH

Pop-up fertilizer has a low salt index, meaning that it won't injure germinating seed, reduce soil bacteria, or burn young roots. Because it's safe to use in contact with the seed, seedlings get off to a faster start, development of an even stand, which promotes greater health and yield potential. Plus, 6-24-6 Pop-up is a unique blend of ortho and poly phosphates (80-20), which are readily available to seedlings. It supplies nutrients to growing corn seedlings up to the fifth leaf stage. Plus, it provides excellent compatibility with many companion products.

EXCELLENT STORAGE QUALITIES AND RETURN ON INVESTMENT

Unlike high salt content fertilizers, 6-24-6 Pop-up fertilizer can be stored in mild steel, stainless steel or poly storage tanks. However, storage in aluminum equipment is not recommended. This product does not require heated storage, as it's not affected by cold temperatures. Low application rates require less product handling, allowing for more acres to be planted in less time. Plus, this product is cost-competitive with other fertility management systems. So when you factor in all the product benefits, it's obvious that 6-24-6 Pop-up fertilizer provides a solid return on your investment.

MICRONUTRIENTS

HIGH QUALITY, HIGH PURITY, LOW SALT INDEX, HIGH SOLUBILITY

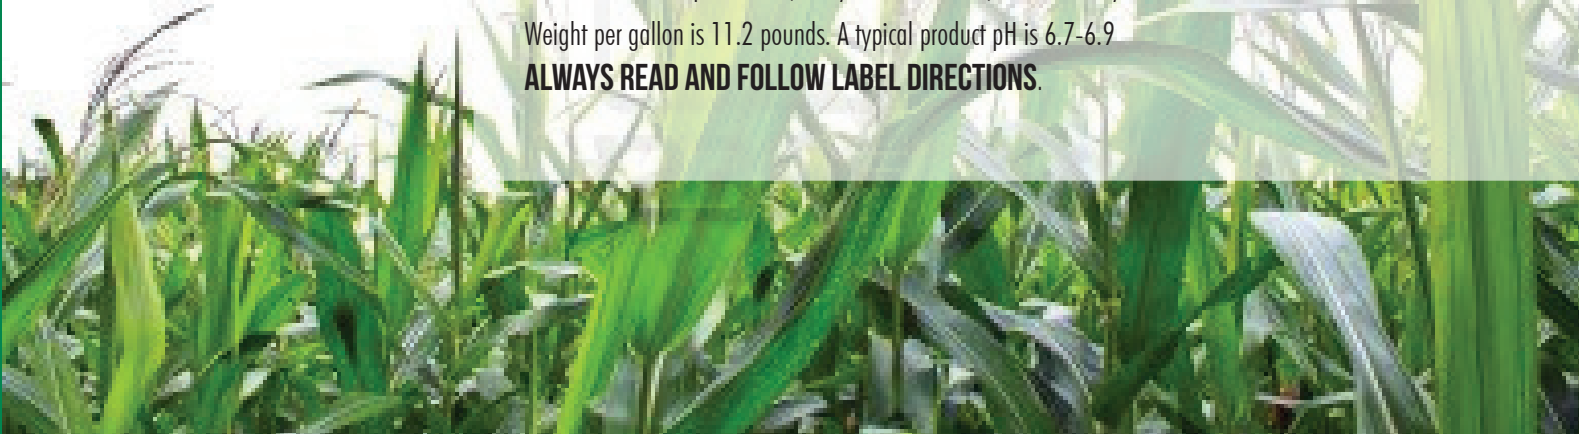

6-24-6 Pop-up is a high quality complete fertilizer designed and formulated to be applied in the seed furrow. This product contains a highly available form of N, P, K. Micronutrients such as Zinc and Sulfur can be added as needed.

DERIVED FROM

Derived from: Phosphoric Acid, Anhydrous Ammonia, Potassium Hydroxide

Weight per gallon is 11.2 pounds. A typical product pH is 6.7-6.9

ALWAYS READ AND FOLLOW LABEL DIRECTIONS.

6-24-6

POP-UP FERTILIZER

LIQUID N-P-K

ENCOURAGES RAPID SEEDLING EMERGENCE AND GROWTH

BENEFITS

Pop-up fertilizer is formulated for in-furrow application, without damaging germinating seedlings or new roots. In-furrow applications result in the following benefits:

INCREASED ROOT MASS

Important available nutrients stimulate early root growth and increased mass root formation. Larger, stronger roots absorb more nutrients and water for improved plant health and standability.

EARLY EMERGENCE

Nutrients are available soon after germination and when the root is forming. Early seedling vigor is enhanced.

IMPROVED STRESS MANAGEMENT

Young seedlings are healthier, and better able to withstand wet soil conditions and cool temperatures.

APPLICATION RATE

3-5 gallons per acre, in-furrow with corn. It can be used on several crops; corn, sugar beets, potatoes, tomatoes and others. Check with your Morral Companies area agronomist for specific use recommendations.

Can be applied with Regent®, Capture®, and other furrow applied pesticides. Always conduct jar test to determine compatibility. Additional information about application equipments is available from your Morral Companies sales representatives. Regent is a registered trademark of BASF • Capture is a registered trademark of FMC Corp.
