

N-K EXTRA FOLIAR FERTILIZER

N-K PLUS FOLIAR FERTILIZER

Slow Release N, K AND EDTA MANGANESE • Encourages pod set and greater seed fill

N-K PLUS INGREDIENTS

Total Nitrogen (N)	14.0%
Potassium (K)	4%
Manganese (Mn)	0.6%

N-K EXTRA INGREDIENTS

Total Nitrogen (N)	14.0%
Potassium (K)	4%
Manganese (Mn)	1.2%

SPECIAL FORMULATION AIDS CROP GROWTH

These blends of special slow release nitrogen and low-salt potassium combined with chelated EDTA Manganese is designed specifically for foliar applications, and will supply growing plants with needed nutrients while minimizing the potential for crop injury. In addition to nitrogen and potassium, N-K Plus and N-K Extra contain good levels of manganese which is important for healthy plants and high yields. EDTA Manganese is compatible with glyphosate herbicide. N-K Plus and N-K Extra are an excellent supplement to soil applied fertilizer, especially when adverse conditions may interfere with normal nutrient uptake.

EASY TO APPLY

N-K Plus and N-K Extra are compatible with most herbicides, fungicides, and insecticides. They can easily be included with glyphosate applications, where it promotes quick recovery from stress conditions. Apply 1-2 gallon per acre to soybeans anytime from third trifoliolate stage through flowering for fast recovery from plant stress or to provide a crop nutrient boost. When mixing with glyphosate herbicides, always use with ammonium sulfate. N-K Plus and N-K Extra should be added to water in the spray tank after ammonium sulfate and before the glyphosate is added. Provide good agitation and do not let mixture set in spray tank for extended periods as settling can occur. Always use quart jar testing before adding to spray tank for compatibility.

DERIVED FROM

Urea, Methylene Diurea, Methylene Ureas, Potassium Carbonate, and EDTA Chelated Manganese. N-K Plus weight per gallon is 10.1 pounds. N-K Extra weight per gallon is 10.1 pounds. A typical product pH is > 8
